Supplement figure S1: AR protein level is not altered. 293 cells were transfected with expression plasmids coding for AR, RhoA V14, RhoA N19, PRK1*, dnPRK1, C3, dnPRK2, or treated with $5 \times 10^{-7} \text{ M Ro31-8220}$ as indicated. Equal amounts of extracts were analysed in Western blots with an $\alpha$-AR antibody.
Supplement figure S2: Nuclear PRK1 in human prostate cancer cells. PRK1 immunoreactivity is also nuclear (arrowheads).

Magnification: 500x.
