Supplementary Figure 2 (Pendaries et al.)
Supplementary Fig. 2. PtdIns(5)P is produced before PI 3-kinase products. HeLa cells labelled with $[^{32}P]$orthophosphate were infected for 5, 15 and 30 minutes with the wild-type M90T (WT) strain and lipids were analysed by HPLC. PtdIns(5)P was quantified by mass assay. A representative experiment is shown.
