**Supplementary Figure 6.** Induction of c-Jun expression and cell death by UV. (A) F9 cells grown in 10 cm dishes were irradiated with UVC or without irradiation. Cells were harvested at different times and the expression of c-Jun and ATF2 was detected using Western blot analysis with anti-c-Jun and anti-ATF2 antibodies. (B) Cells with or without UV irradiation were harvested immediately (0 time) or at 24 and 48 h for cell viability assay using Vibrant MTT Cell Proliferation Assay Kit (Molecular Probes).
