Figure S4. The spindle assembly is intact in the cells treated with Lat B, Y-27632, or blebbistatin. Synchronized HeLa cells on fibronectin were treated with DMSO (Control), Lat B (10 μM), Y-27632 (50 μM), or blebbistatin (100 μM) for 2 h. Percentage of the mitotic cells with normal bipolar spindles in each condition is shown. More than 100 mitotic cells were analyzed in each condition, and the mean±s.d of three analyses is shown. *P =0.34, **P =1, and ***P =0.39, as compared with control, analyzed by t-test.
