Figure S25. Analyses of single-PAS genes. (A) Fip1 iCLIP map for group A (the 77 genes that showed significant decrease in mRNA levels in Fip1 KD cells) and the rest of single-PAS genes (group B). The iCLIP maps are made as described for Figure 5E. Top: iCLIP map for -100nt to +100nt relative to the cleavage site (0 nt). P value for the difference between A and B: 8.06x10^-10. Bottom: iCLIP map for the whole 3’ UTR. P value for the difference between group A and B: 2.36x10^-62. (B) DRS read counts for genes in group A and B. No significant difference was detected.
